

JOSE ANDRES BARRIENTOS

Silver Spring, MD | (240) 351-6468 | andresb@umd.edu | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data analyst with 4 years of supply chain analytics experience supporting B2C drop-ship operations for Walmart, Target, and Amazon. Proficient in Excel (Advanced), Power BI, and Power Query. Self-taught in Python and SQL. Pursuing Master's in Software Engineering at UMD.

TECHNICAL SKILLS

Analytics & BI: Excel (Advanced, Power Query, Pivot Tables, VBA), Power BI (DAX, Drill-throughs)

Programming: Python (intermediate), SQL (developing), JavaScript (basic)

Data & ML: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow (coursework/projects)

Tools: Git, AWS (coursework), Tableau (basic)

EDUCATION

Master of Engineering in Software Engineering

Expected May 2027

University of Maryland, College Park | College Park, MD

Relevant Coursework: Machine Learning, Algorithms, Data Structures, Distributed Systems, Database Systems, Software Engineering

Bachelor of Science in Industrial Engineering

December 2019

Universidad Dr. Jose Matias Delgado | San Salvador, El Salvador

PROFESSIONAL EXPERIENCE

Data Analyst | Intradeco

September 2021 – August 2025

San Salvador, El Salvador

- Built and maintained Power BI dashboards from SAP-exported Excel data, giving managers real-time visibility into delivery, inventory, and SKU metrics for Walmart, Target, and Amazon.
- Developed drill-through reports from product style (parent) to individual SKU level, enabling granular analysis of inventory gaps and delivery performance.
- Identified a data transmission discrepancy between FedEx, Intradeco, and Walmart that, once resolved, eliminated a recurring reconciliation error saving significant costs.
- Automated weekly reporting workflows using Excel and Power BI, reducing manual preparation time and ensuring consistent delivery of analytics to commercial stakeholders.

Quality Assurance Coordinator | SigmaQ Specialty

January 2021 – June 2021

San Salvador, El Salvador

- Designed testing procedures and data collection frameworks to validate product compliance, reducing defect rates by 18%.
- Analyzed quality metrics and customer feedback data to identify process improvement opportunities, increasing efficiency by 12%.

Customer Service Representative | Telus International

June 2020 – December 2020

San Salvador, El Salvador

- Resolved 40+ customer inquiries daily across multiple channels, maintaining 95%+ satisfaction rating.
- Identified recurring complaint patterns and collaborated with technical teams to reduce support volume by 12%.

TECHNICAL PROJECTS

FINEAS – Personal Finance App | 2026 – Present | Co-founder

Next.js, Expo (React Native), TypeScript, Supabase (PostgreSQL), Claude API | Pre-launch

- Co-founding a personal finance hub for Salvadorans: financial diagnostic, 3-tap expense tracker, and advisor booking, all in Spanish.
- Built web (Next.js) and native iOS/Android (Expo) apps in one TypeScript monorepo on Supabase, with row-level security, AES-256 encryption, and rate limiting.
- Implemented a 7-factor financial scoring engine and server-side Claude API analysis; platform covered by 3,400+ automated tests ahead of launch.

Margaux & Arden – Wedding Studio Website | Freelance | 2026

HTML, CSS, JavaScript (ES modules) | Live on GitHub Pages

- Designed and shipped a dependency-free one-page site for a luxury wedding studio: scroll-driven “wedding day” scene sequence, focus-trapped lightbox, and swipeable carousel, fully keyboard and touch operable.
- Localized all copy in Spanish for the Salvadoran market; zero runtime dependencies and self-hosted fonts.

GitHub Issues Analytics Platform | University of Maryland | Aug – Dec 2025

Python, Scikit-learn, Pandas, Plotly | Team Project (Software Engineering)

- Built data analytics pipeline processing 5,200+ GitHub issues with 90% test coverage using pytest.
- Developed Random Forest and Gradient Boosting classifiers achieving 80% accuracy for issue priority classification.
- Created 7 interactive Plotly visualizations including contributor lifecycle analysis and engagement heatmaps.

Road Damage Detection Using Deep Learning | University of Maryland | Aug – Dec 2025

Python, PyTorch, TensorFlow, Google Colab | Team Project (AI/ML Fundamentals)

- Built image classification pipeline for 907 images using transfer learning and data augmentation in PyTorch.
- Benchmarked 4 architectures (ResNet-18, MobileNetV3, EfficientNet-B0, ViT-Tiny); reduced training time by 44%.

AI Game Engine with Minimax Algorithm | University of Maryland | Aug – Dec 2025

Python, Algorithm Design | Course Project

- Implemented minimax with alpha-beta pruning, achieving 40–60% reduction in search space complexity.
- Developed heuristic evaluation function; AI achieves 90%+ win/draw rate at search depth 6.
